Dear Hiring Manager,

Subject: Application for Software RF Engineer

I am writing to apply for the Software RF Engineer position at your organisation. I bring more than nine years of overall experience — 6+ years in technical support and 3.5+ years in application coding — with strong desktop development skills in Qt/QML (C++) and C#/.NET 8.0 (WPF, WinForms, MVVM).

Currently at Astra Microwave Products Ltd (since November 2023), I understand client requirements and develop applications for RF Test Jigs — instrument and jig control over RS-232, RS-485, and TCP/IP, FTP file transfer, and automated report generation using Qt ActiveX controls and C# libraries (ClosedXML, CsvHelper). I also build defence and space software: ELINT/Electronic Warfare GUI applications with ScottPlot 5 data visualisation and PostgreSQL, MIL-STD-1553 (DDC) interface applications, and RF automated test equipment that controls Keysight and NI instruments over SCPI. Previously, at Epigon Media Technologies, I progressed from Technical Support Engineer to Qt/QML GUI Development Engineer, delivering production software for power-quality monitoring systems, a broadcast content management and distribution platform, and an eye-tracking and image-processing product. That work involved custom QML components, MVC/MVVM, multithreaded live-data UIs, TCP/UDP and UART device integration, SQLite, OpenCV, FFmpeg/GStreamer, and Python Flask REST services.

Because I started on the support side, I debug with the end user in mind — I understand how software behaves in the field, not only in the development environment. I am based in Hyderabad, open to rotational shifts and travel, and comfortable working with distributed teams.

I would welcome the opportunity to discuss how my RF test and instrumentation experience — with Qt/QML, C#, and Linux — can contribute to your team. Thank you for your time and consideration.

Sincerely,

Satyanarayana Reddy T
